CAPPO200

It's a Multicalibrator for reading and simulating temperature and electrical quantities, and can also be used as a pressure calibrator, with the acquisition of pressure modules and a generating pump.

CAPPO 200's MAIN FEATURES

- Input for Smart Probe (optional);
- One or two inputs for pressure modules (optional);
- Bluetooth Serial Communication (optional);
- Two isolated 24Vdc sources to power transmitters;
- Two channels for simultaneous reading of Smart Probe and reading channel;
- Two channels for simultaneous reading of pressure modules;
- Value of temperature difference between Smart Probe and reading channel;
- Pressure difference value between connected pressure modules;
- Isolated Reading and simulation of Thermocouples, Resistance thermometers, Current, Voltage, Resistance, Frequency and Pulses;
- Visualization of measured values in graphic form, with maximum and minimum values stored;
- Ramps and Baselines, Engineering Scale, Leak Test, Switch Test and Probes;
- High thermal stability, precision and 32bit resolution;
- Modern and anatomical design.
